	3 rd		PRO PAX Ultimate Lawn Food								
	4 th						PRO PAX Fall & Winter				
		FEB.	MAR.	APR.	MAY	JUNE	JULY	AUG.	SEPT.	OCT.	NOV.

What: PRO PAX Ultimate Galleria
When: Early spring to mid-to-late spring. Repeat application in fall for optimum results. (see chart above)
How: Apply as directed and immediately water heavily to bond herbicide to soil. Do not aerate or break this barrier.
Why: The "ultimate fertilizer and weed preventer" prevents seeds from germinating up to 180 days. This includes dandelions, spurge and crabgrass.

What: PRO PAX Ultimate Lawn Food Plus Weed Control
When: Mid-to-late spring to early summer. (see chart above)
How: Apply as directed. With weed & feed products, water heavily the day prior to application, sprinkle lightly the day of application and withhold water for a minimum of 24 hours after application. Daytime temperature must be 65 degrees or above for herbicide to be effective. Not recommended for use in temperatures over 85 degrees.
Why: Not harmful to grass. Kills over 300 broadleaf weeds by being absorbed through the weeds' foliage. Fertilizer with extra iron provides a dark green that lasts up to 3 months.

What: PRO PAX Ultimate Lawn Food
When: Mid-summer to early autumn. (see chart above)
How: Apply as directed, water in thoroughly.
Why: Provides lush green grass for up to 3 months. Extra iron promotes lush, dark green appearance.

What: PRO PAX Fall & Winter
When: Early autumn to late autumn. (see chart above)
How: Apply as directed, water in thoroughly.
Why: Provides nutrients for root development, helps prevent winter damage.
